## **DETAILED ACTION**

### ***Summary of changes in this action***

1. All the claims are now rejection under 35 U.S.C. § 103, responsive to the amendment.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-37 are rejected under 35 U.S.C. 103(a) as being unpatentable over Spanoche (USPN 6,538,491) in view of Foss et al. (USPN 5,828,620). The above-discussed circuit to Spanoche discloses a circuit similar to that claimed, but does not disclose any details regarding the charge pump 623. The reference to Foss et al. discloses, in Fig. 3, a charge pump circuit having complementary transistors. Therefore, it would be more than reasonable to consider any of the transistors to be “complementary” since each is complementary to another transistor. The reference to Foss et al. discloses that the circuit has the advantage of eliminating drift. Therefore, it would have been obvious for one skilled in the art to use the specific charge pump circuit in Fig. 3 of Foss et al. for the broad charge pump of Spanoche to obtain the expected advantage of eliminating drift in the combination.

Examiner has considered Applicant’s remarks and has not found them to be persuasive. While Examiner agrees that the arrangement on page 9 of the remarks is, in a broad sense, a “complementary switch”, the term “complementary switch” is in no way limited to being such

only such an arrangement. The more commonly used term for the arrangement on page 9 would be a “transmission gate”. However, the broadest reasonable interpretation of a “complementary switch” would be a switching circuit having a complementary arrangement. Since the circuit of Fig. 3 of Foss et al. has complementary transistors (e.g., 25 and 26), it is seen that such can reasonably be considered to be a “complementary switch”.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
